

Introducing

RemotePoint[®] Presenter

Sleek New Wireless Remote Puts Presentations, Cursor Control and Memory for Presentation Storage at Your Fingertips!

Camarillo, California, June 24, 2003 --Interlink Electronics, Inc. (Nasdaq:LINK), the world leader in the development of intuitive interface solutions and technologies for business and home applications, today unveiled *RemotePoint Presenter*—the computer industry's most advanced wireless presentation system. With its polished metal case design, icon-studded keys, integrated "mouse" joystick and 32 megabytes of onboard memory for presentation storage, *Presenter* puts professionals firmly in command of their PowerPoint[®] slides, Internet sites, meeting spreadsheets and virtually every tool on their PCs.

"Corporate professionals give more than 100 presentations each year," says Jim Reisteter, Vice President, Interlink Electronics, Inc. "*Presenter* was designed to enhance the delivery of these presentations, increasing the kind of relaxed confidence and spontaneity that is so crucial when standing at the head of the boardroom, or sitting down across the table from a new client."

About RemotePoint Presenter

RemotePoint Presenter is quite possibly the presentation industry's most advanced remote control. Its polished metal, icon-studded control keys support the slide functions used by today's PowerPoint users. An integrated pointing stick and patented ClickTrigger[®] primary click button provide 360-degree "mouse" control for navigating the Internet, Web-meeting software or boardroom spreadsheets. RF wireless technology puts presenters in complete control from up to 100' feet away, regardless of which way they are facing or where they are standing in the room.

The *RemotePoint Presenter* also provides 32 megabytes of storage memory integrated into its RF receiver—an innovation new to the presentation industry. Save your presentation, along with any other files that you may need, for a trip across town or around the world. Simply insert the USB receiver and save or run your presentation directly from the onboard memory. For presentations that require that extra touch, assign Presenter’s “hot key” with any one of dozens of presentation effects from the included software toolkit.

RemotePoint Presenter is a USB input device designed for Windows XP/ 2000/ 98/ Me systems. Installation requires no software drivers. Just plug in the USB receiver, install the batteries and go! It’s that simple. Available starting June 2003, *Presenter* has a manufacturer’s suggested list price (MSLP) of only \$199. **Contact Interlink Electronics at (800) 340-1331, (805) 484-1331, or see *RemotePoint Presenter* online at <http://www.rppresenter.com>.**
